WG	Name	Media Over QUIC
	Acronym	moq
	Area	Web and Internet Transport ( <a href="#">wit</a> )
	State	Active

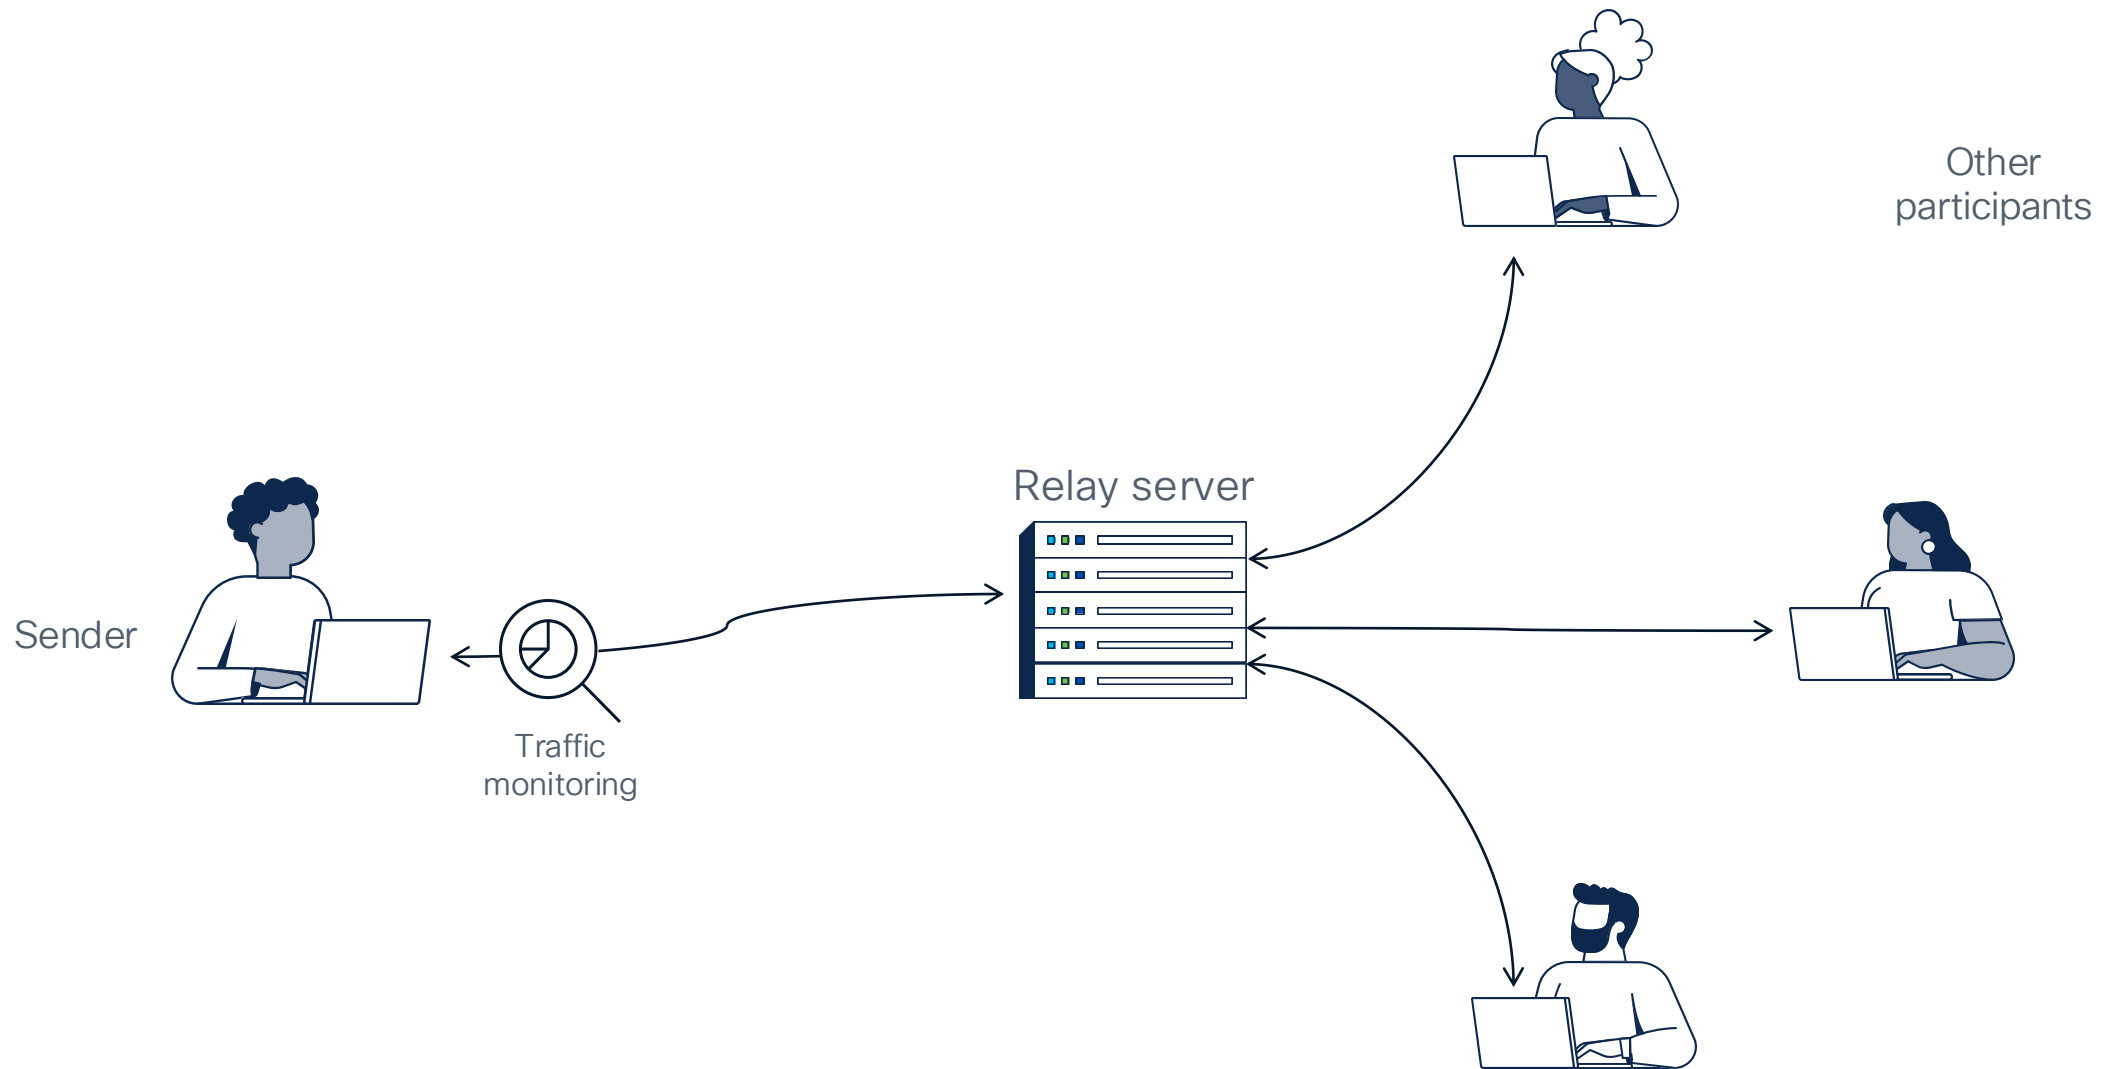

# Our contributions

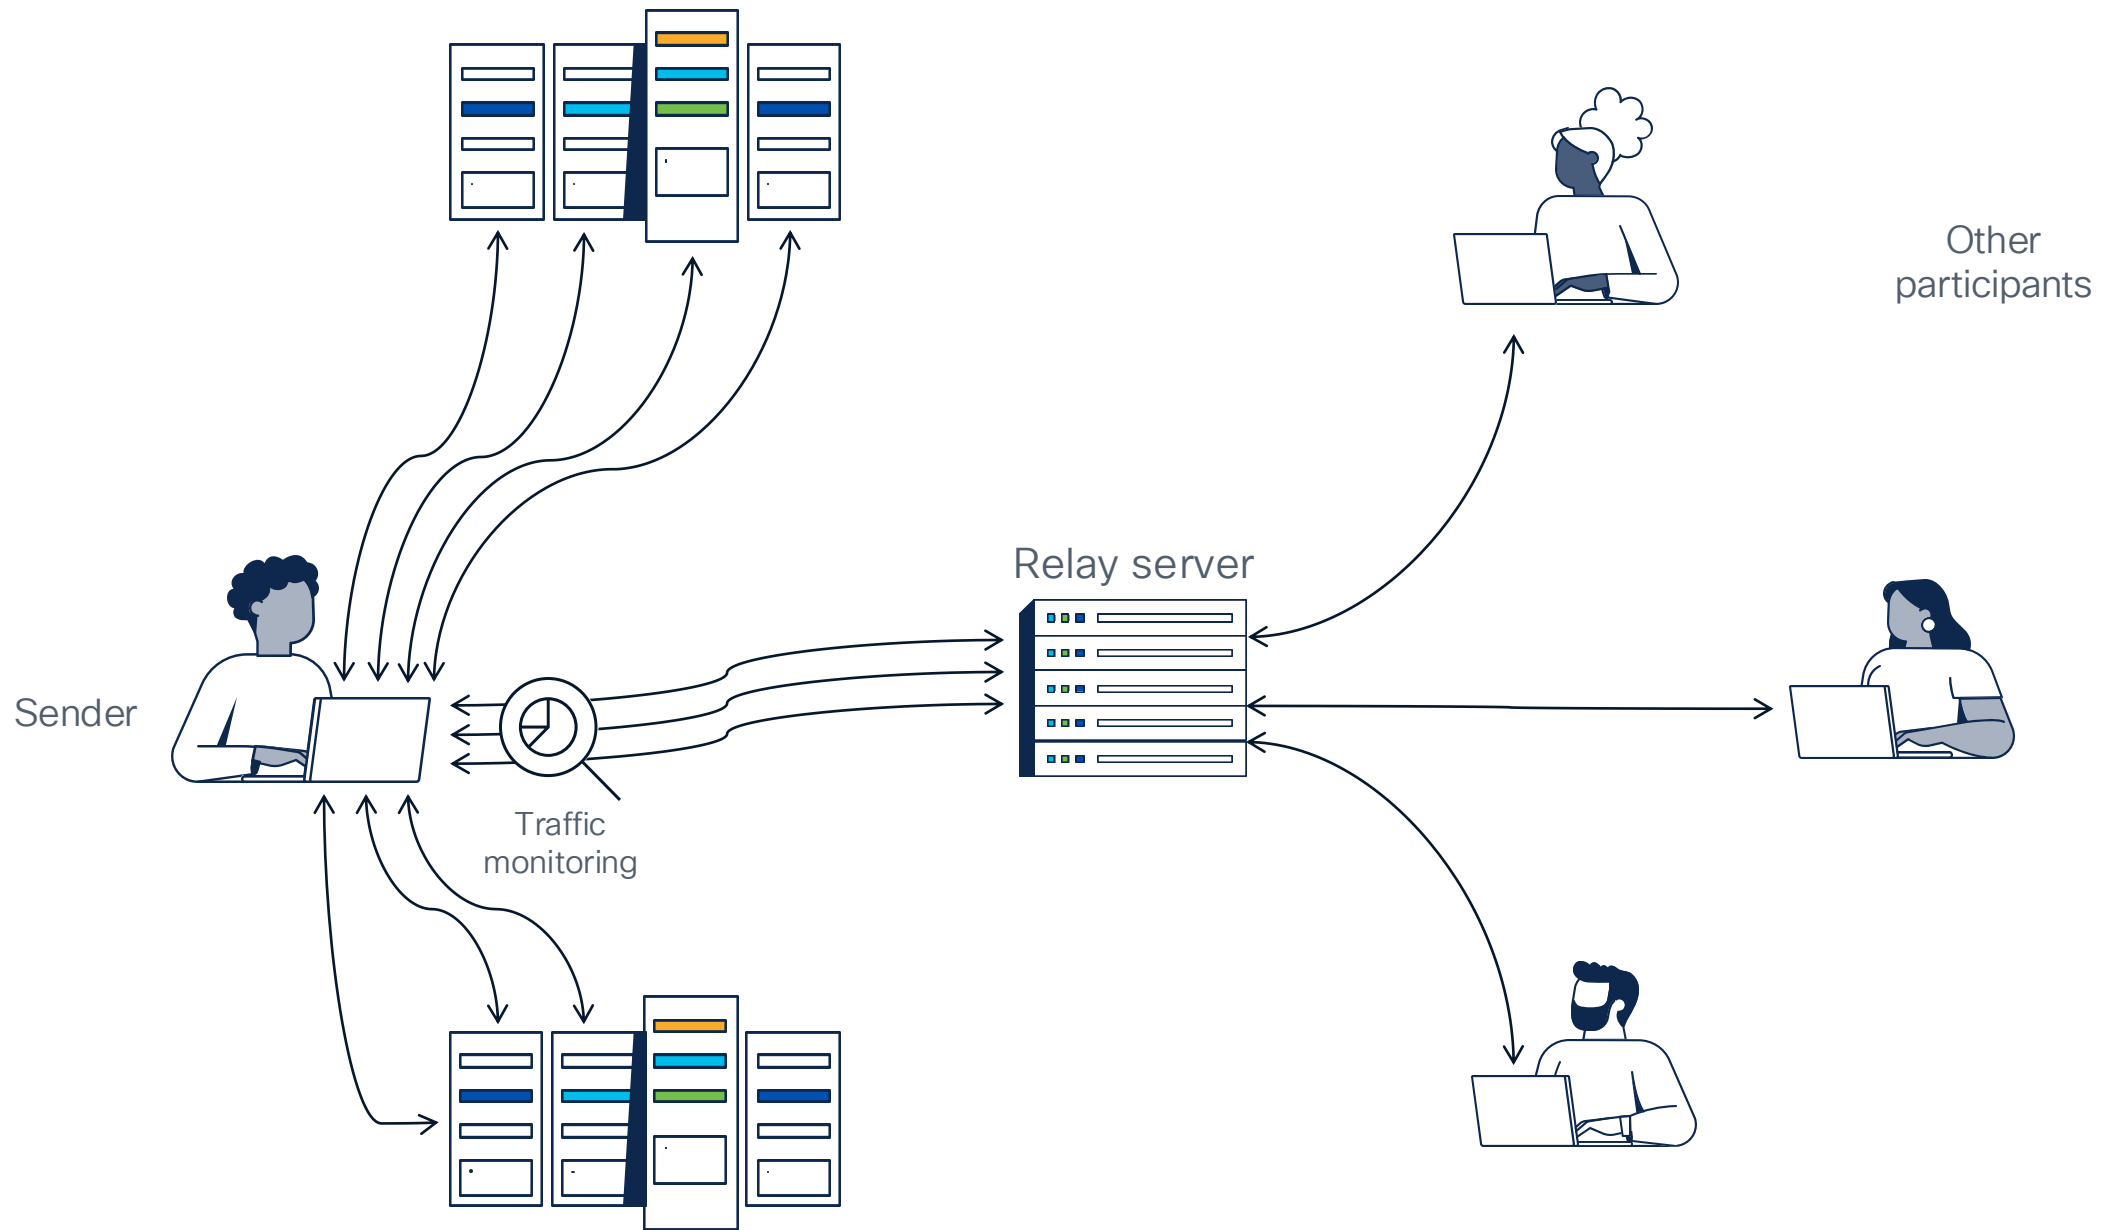

Media flow detection  
method relying on  
packet timings

Expand state-of-the-  
art QoE estimation  
using only packet  
timings and sizes

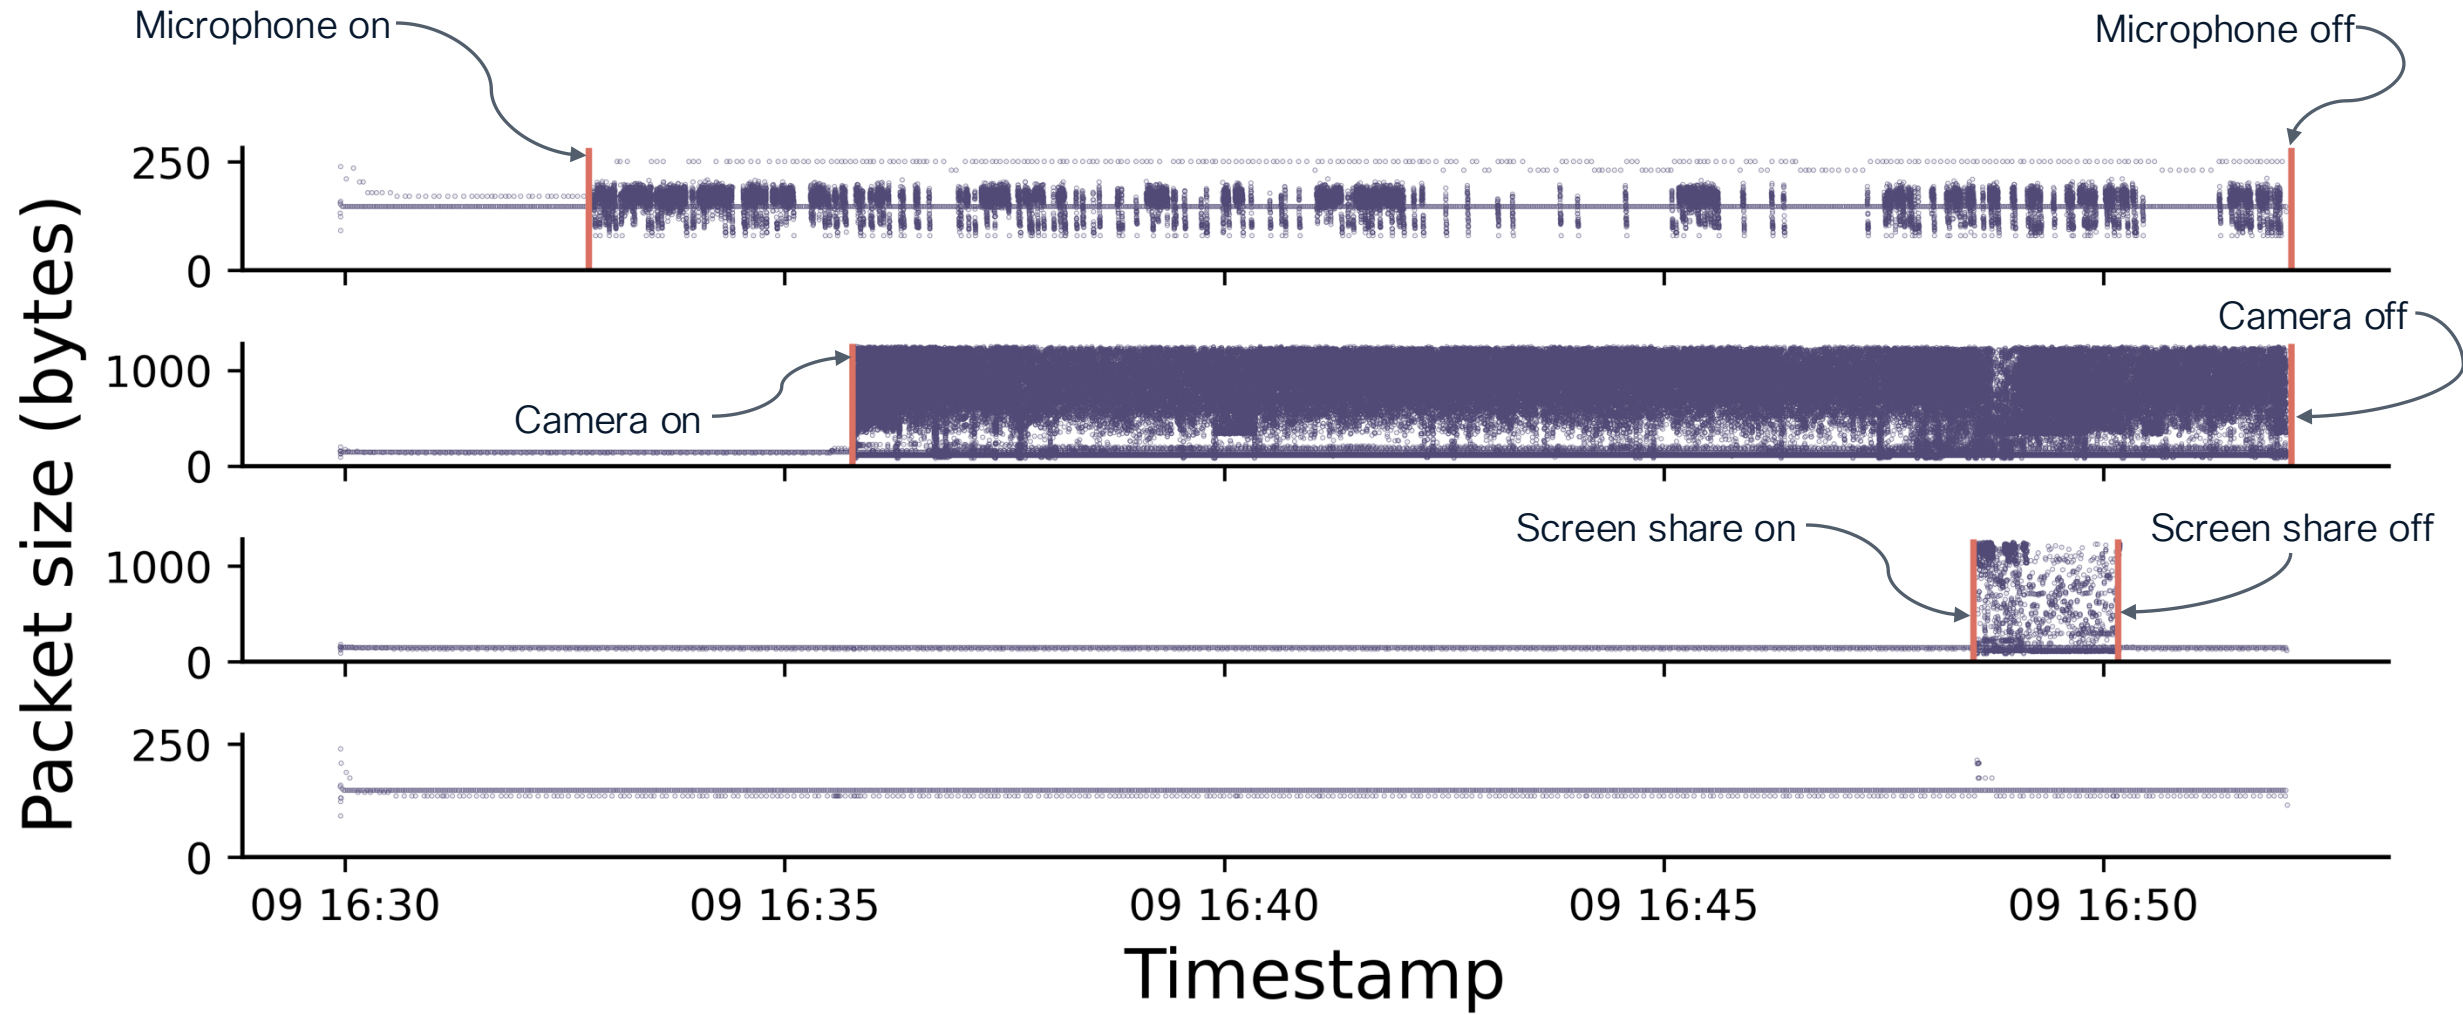

New directions for  
screen share detection  
and network  
degradation estimation

Detecting media flows

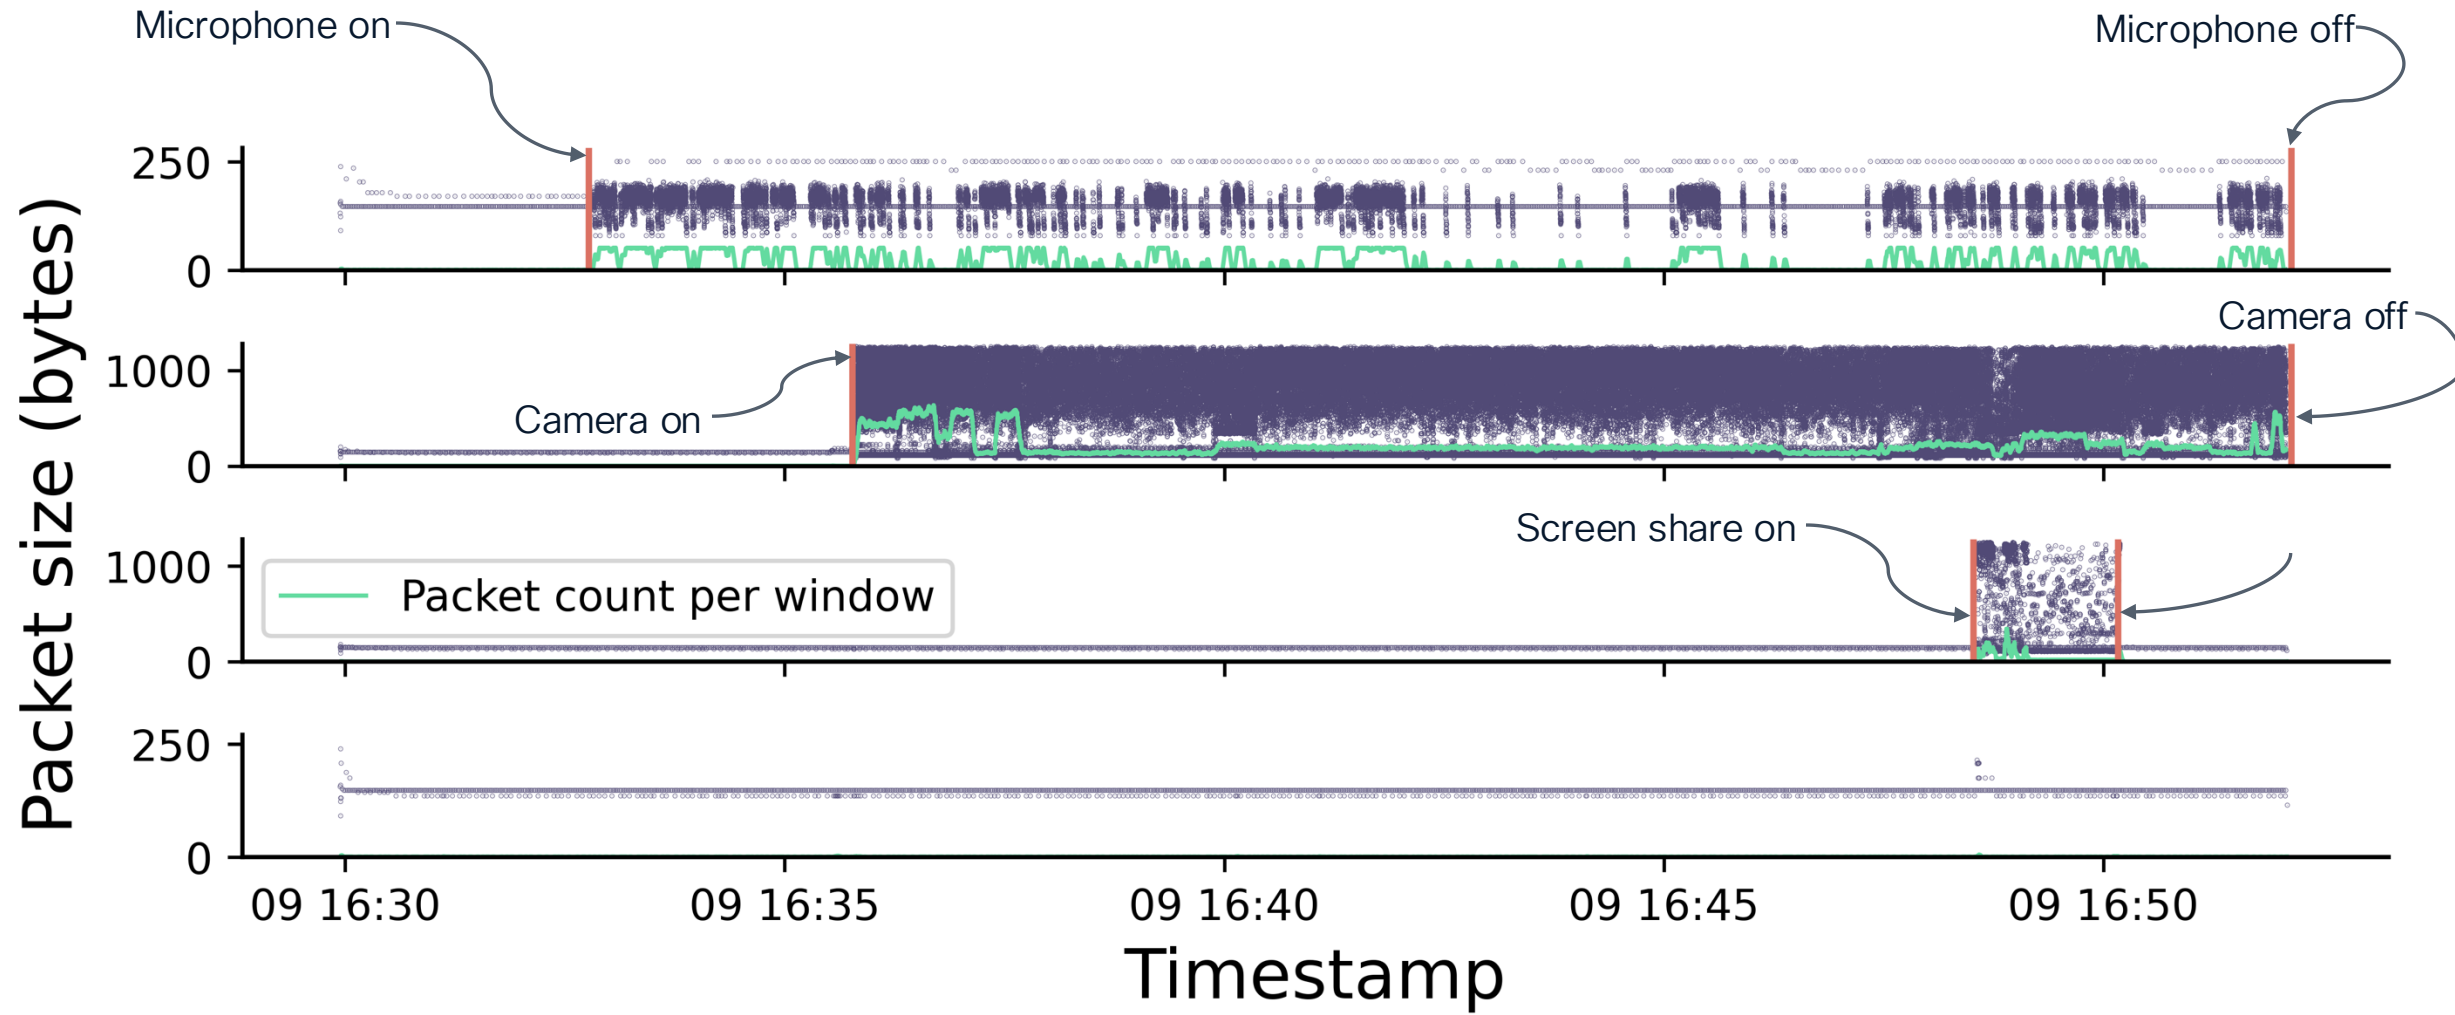

# Let's look at the traffic

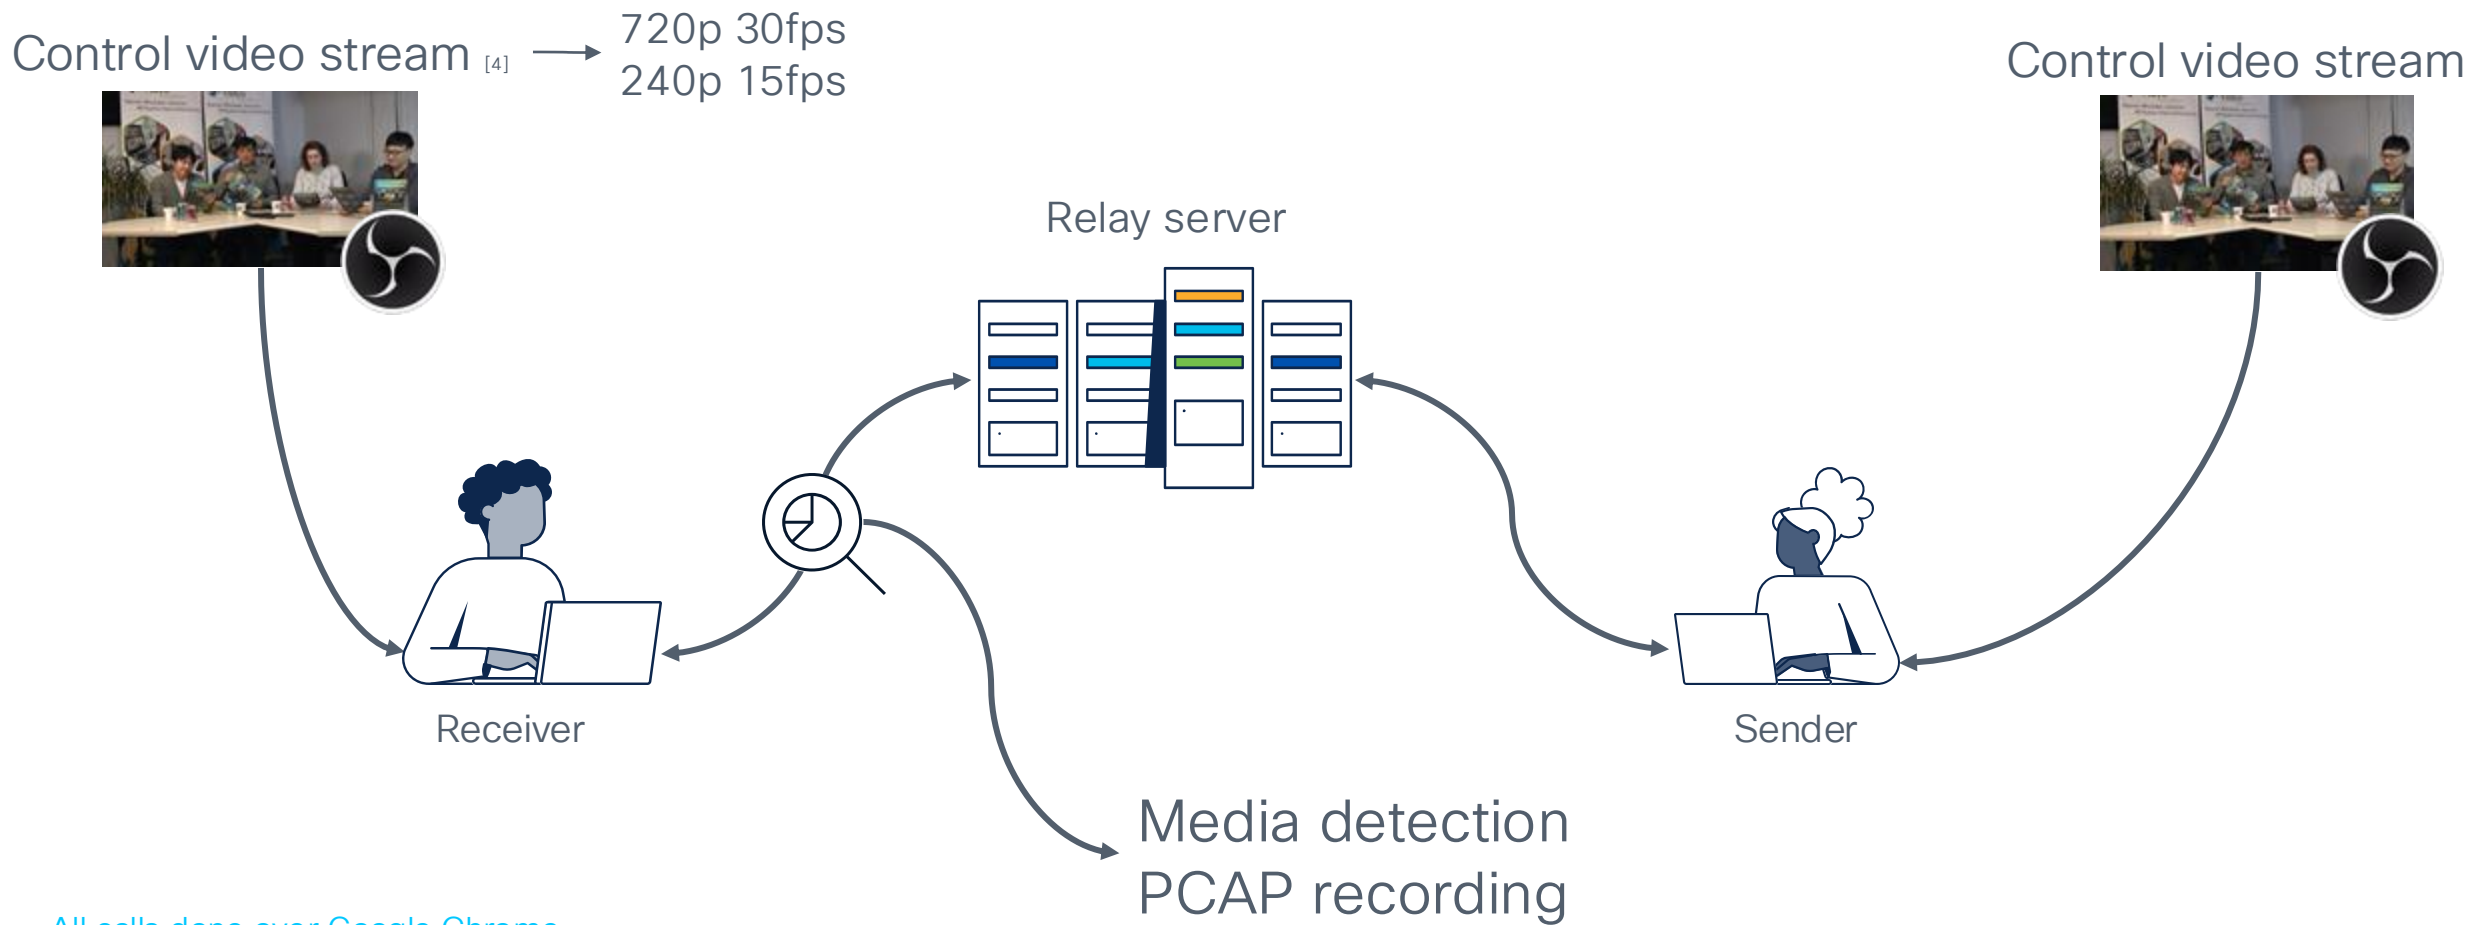

# Let's look at the traffic

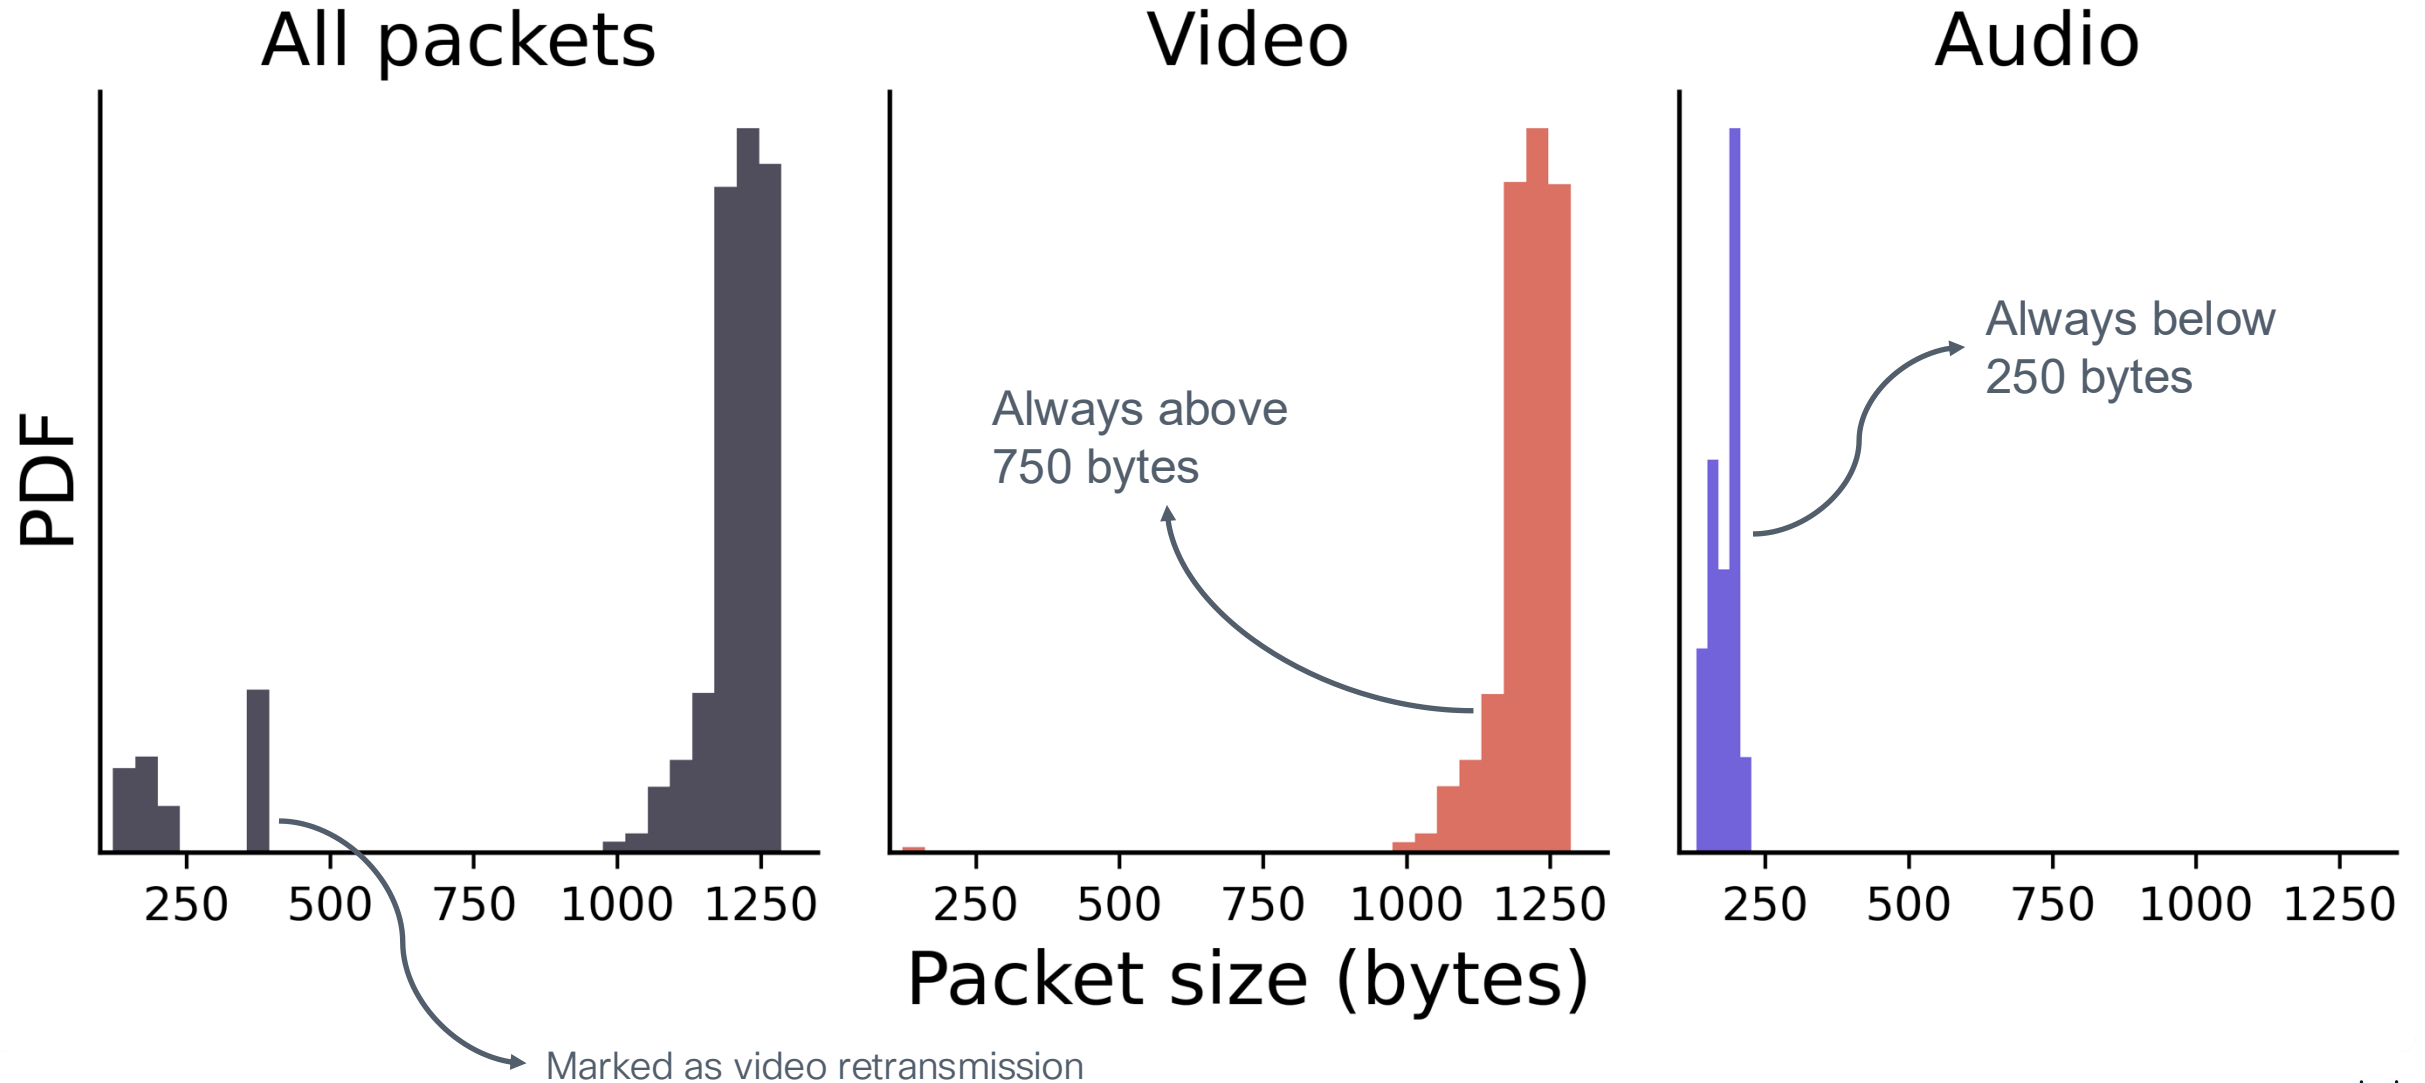

Passive QoE metrics estimation

# Experiments setup

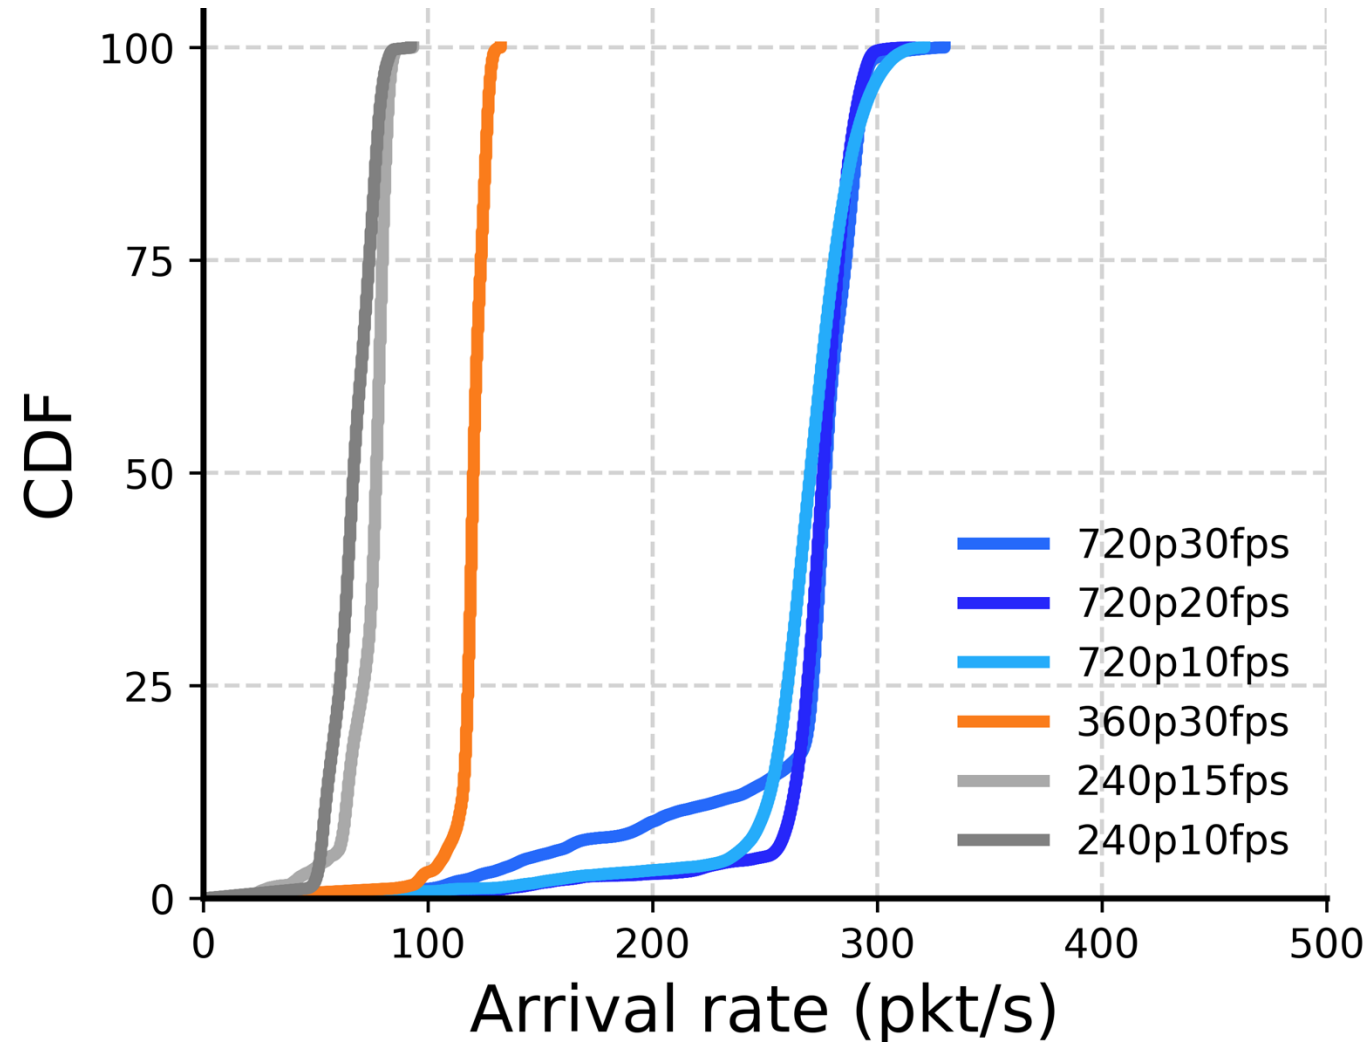

All calls done over Google Chrome  
Ground truth from <chrome://webrtc-internals>

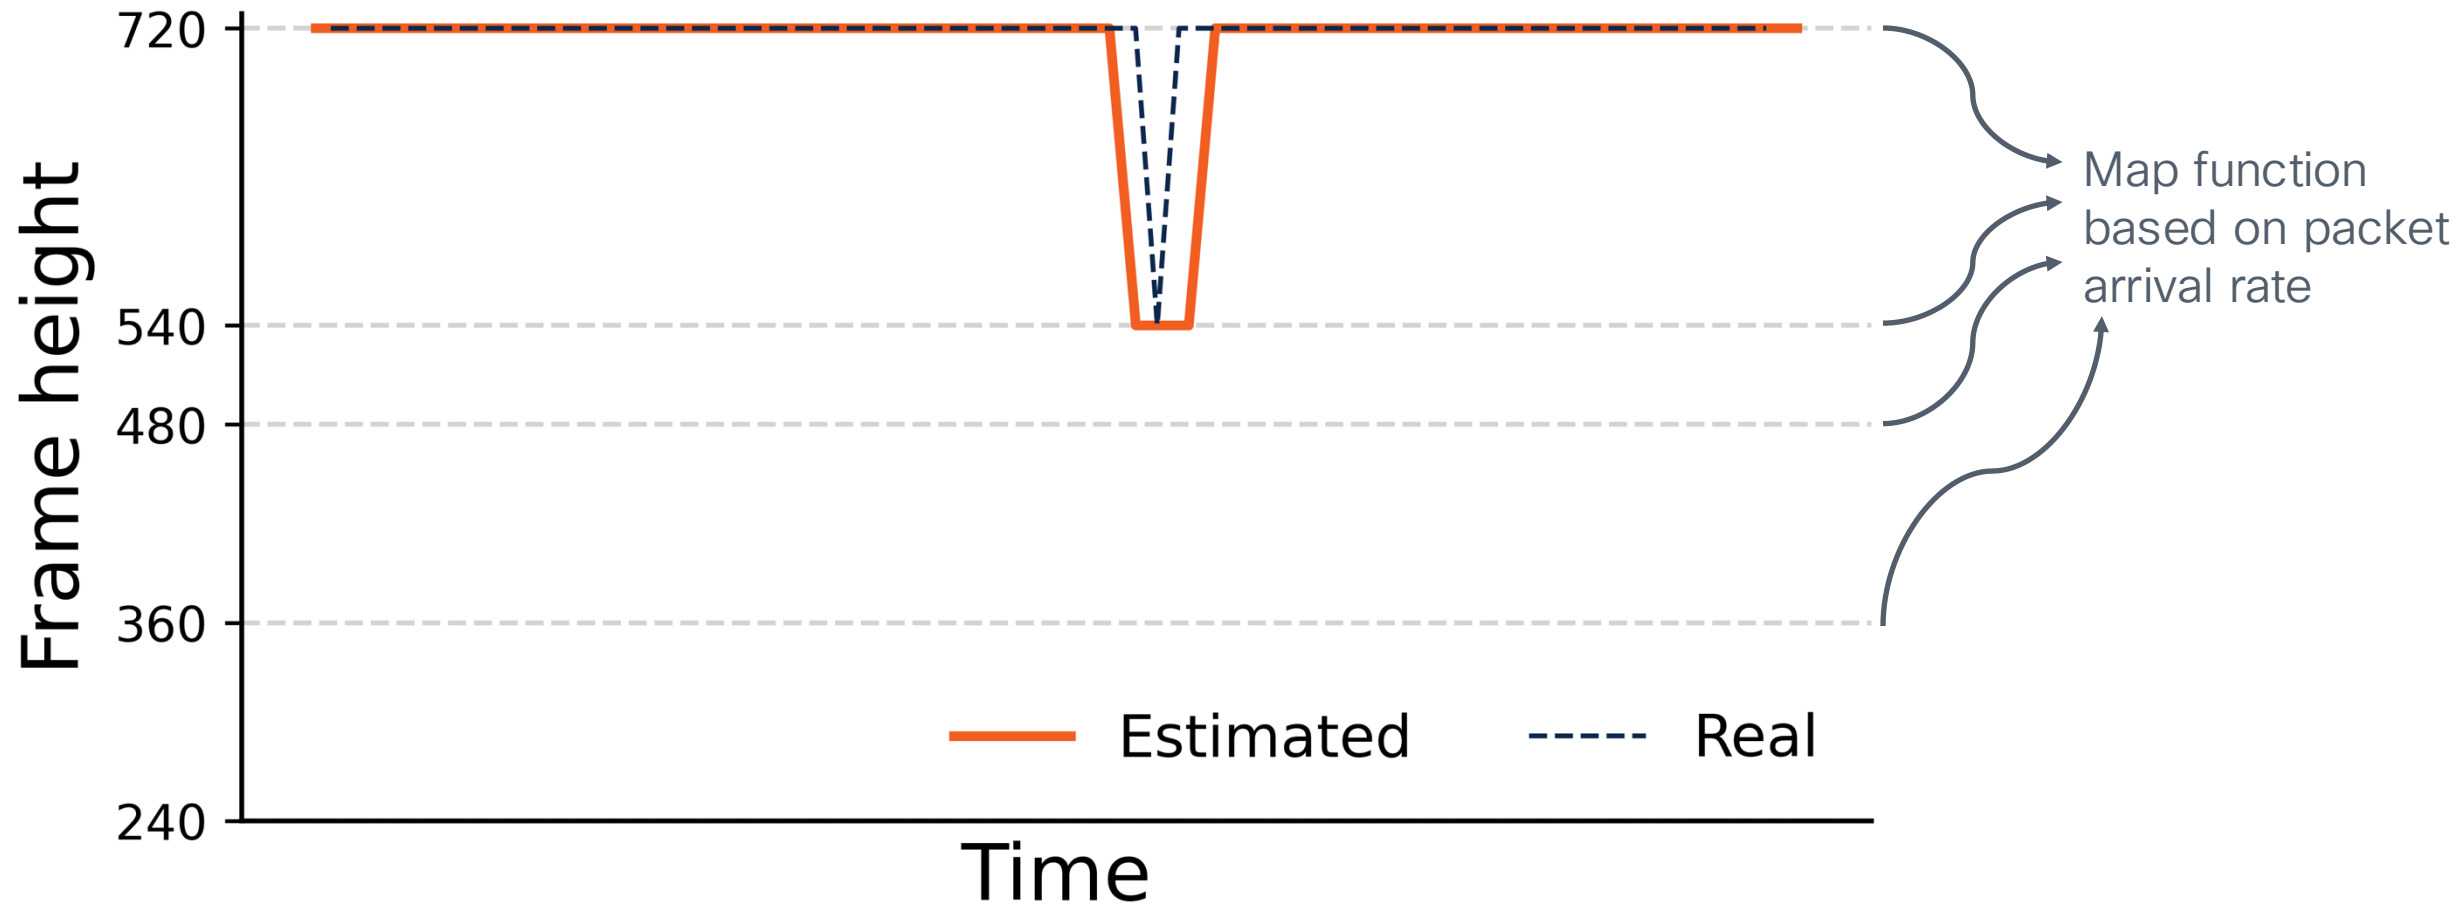

# Inferring media type

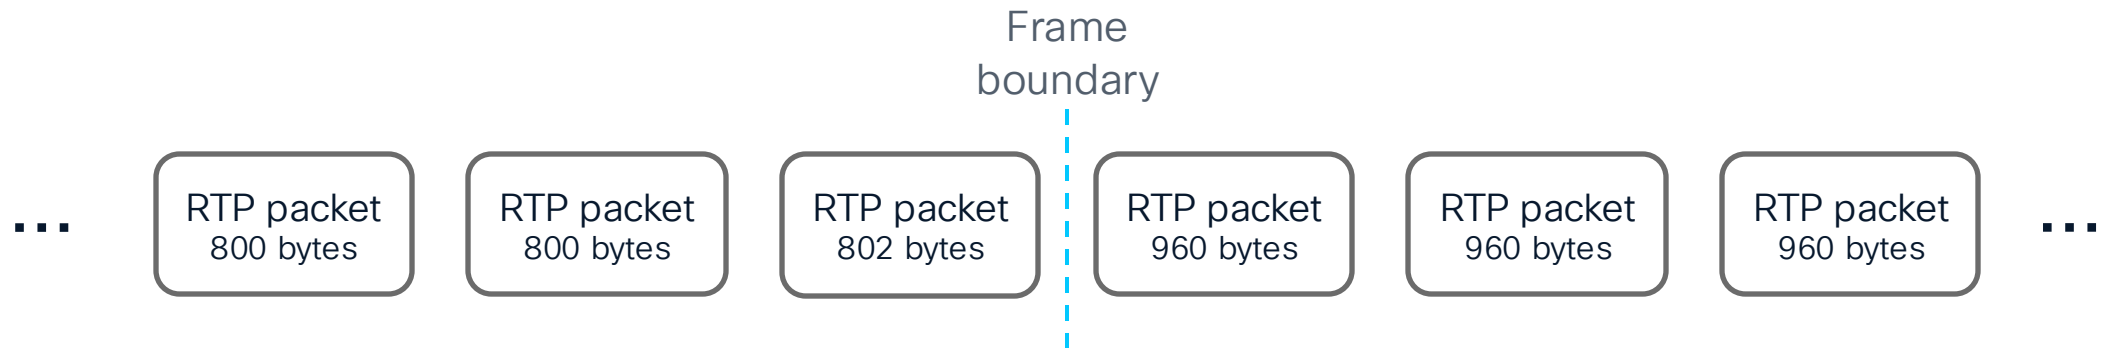

# Video resolution estimation

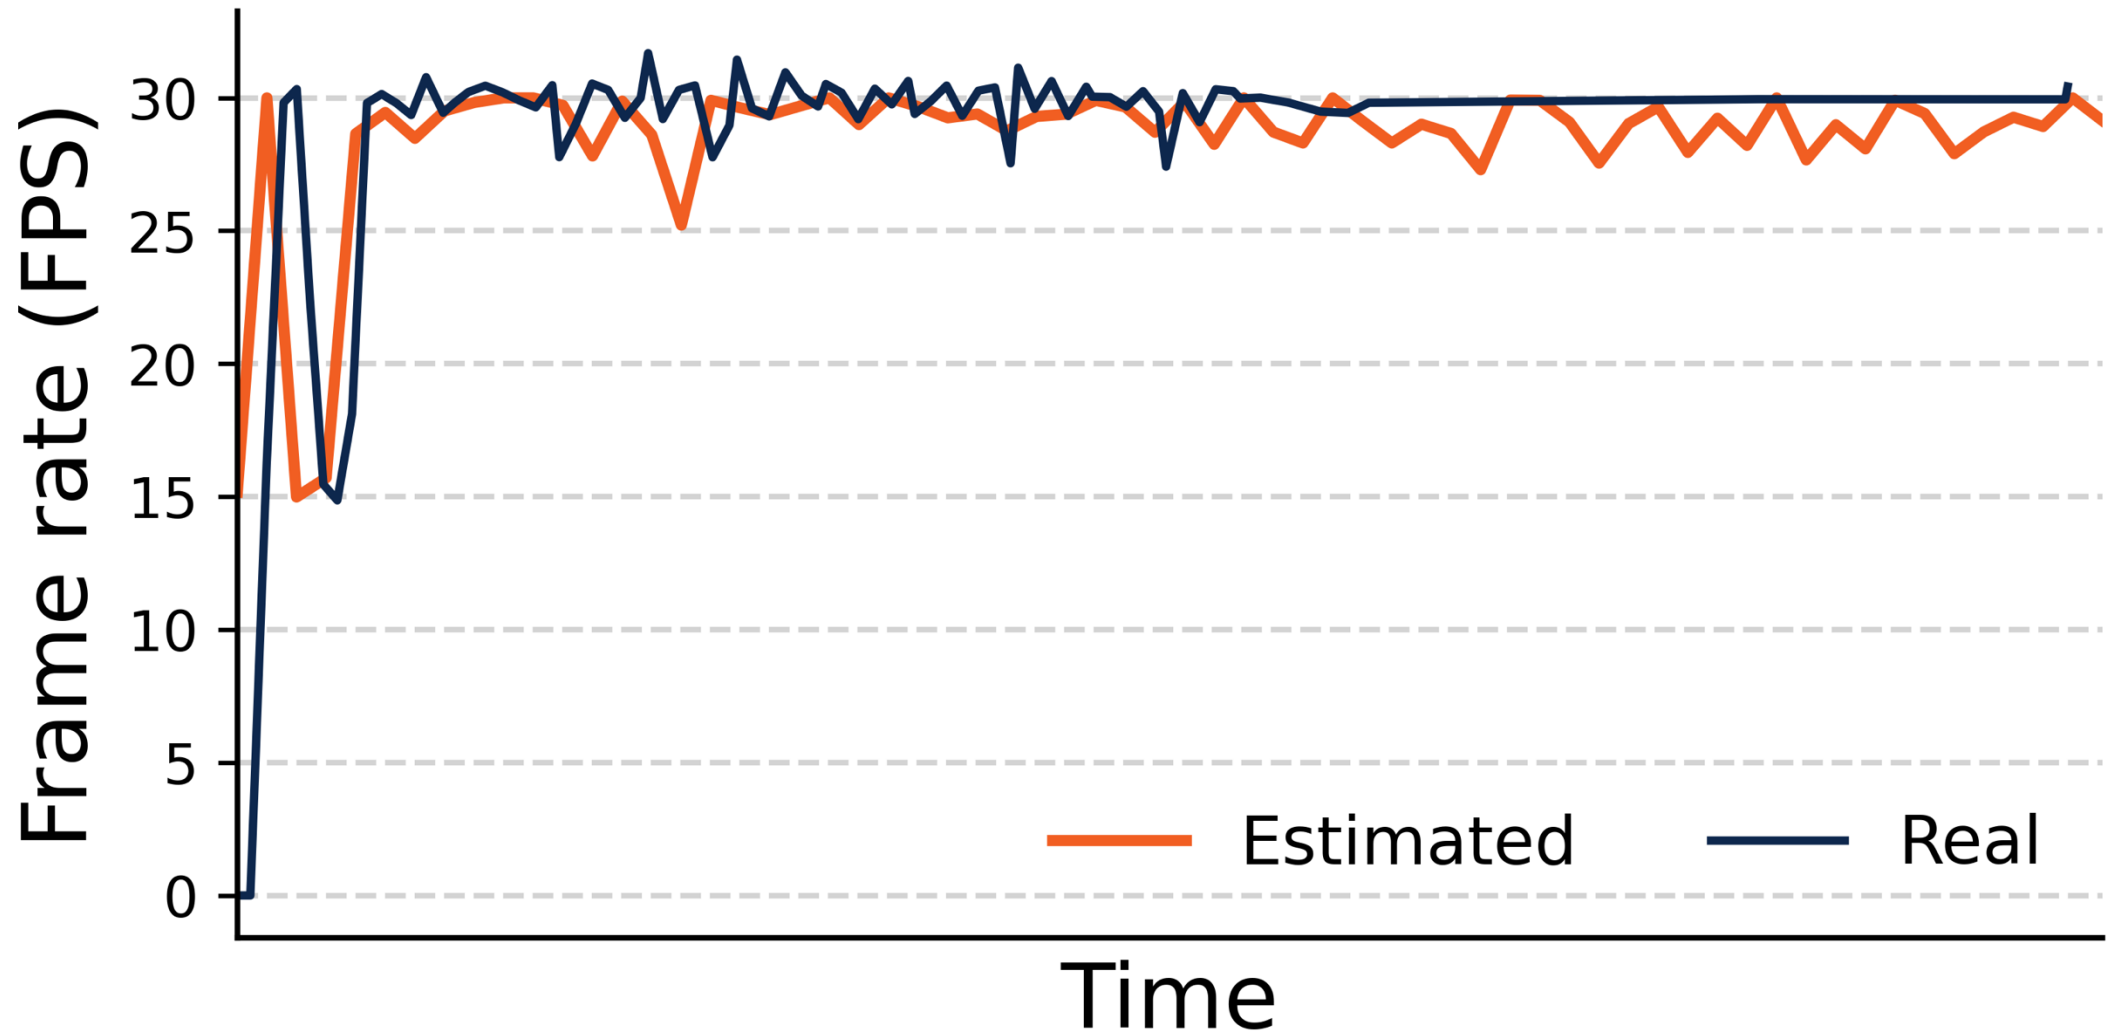

# Video resolution estimation

# Frame boundaries identification

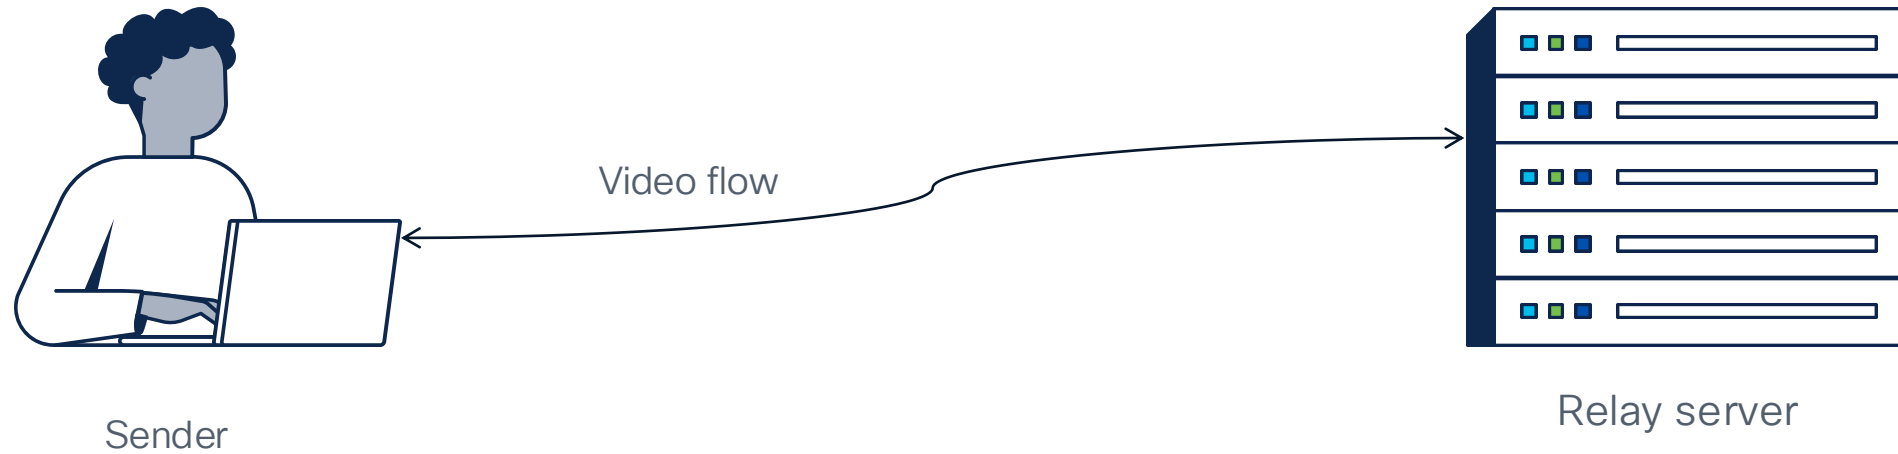

# Frame rate estimation

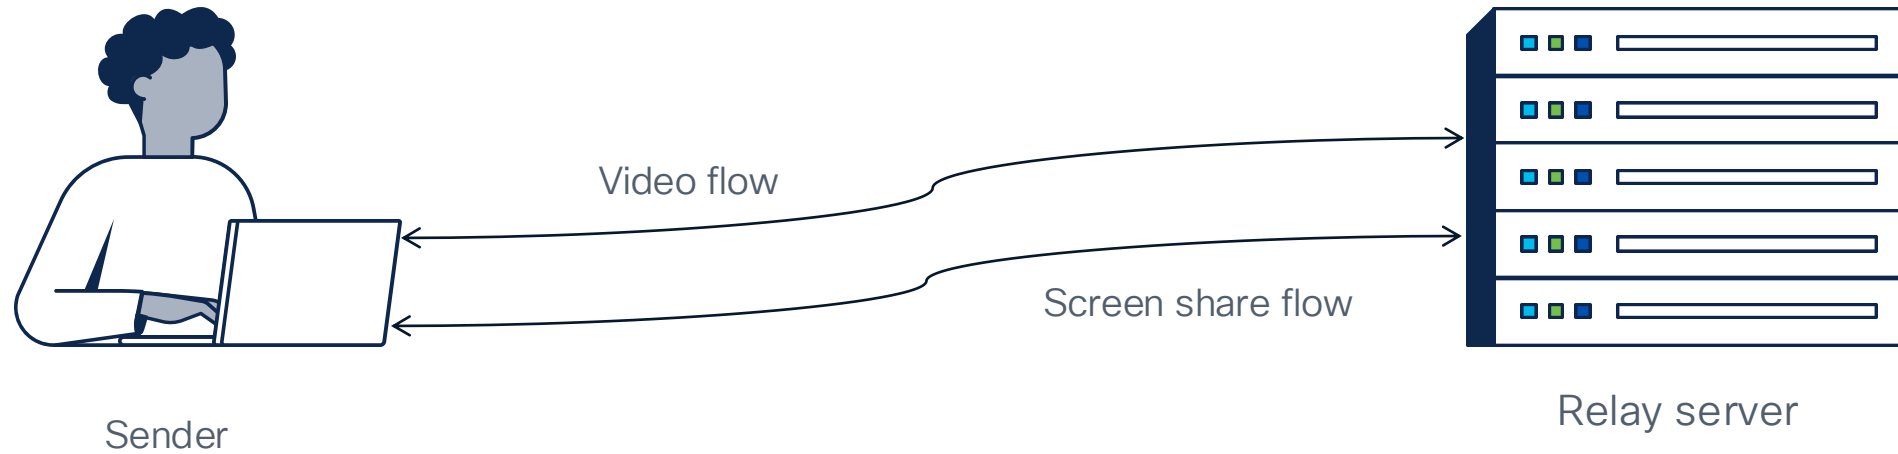

What's next?

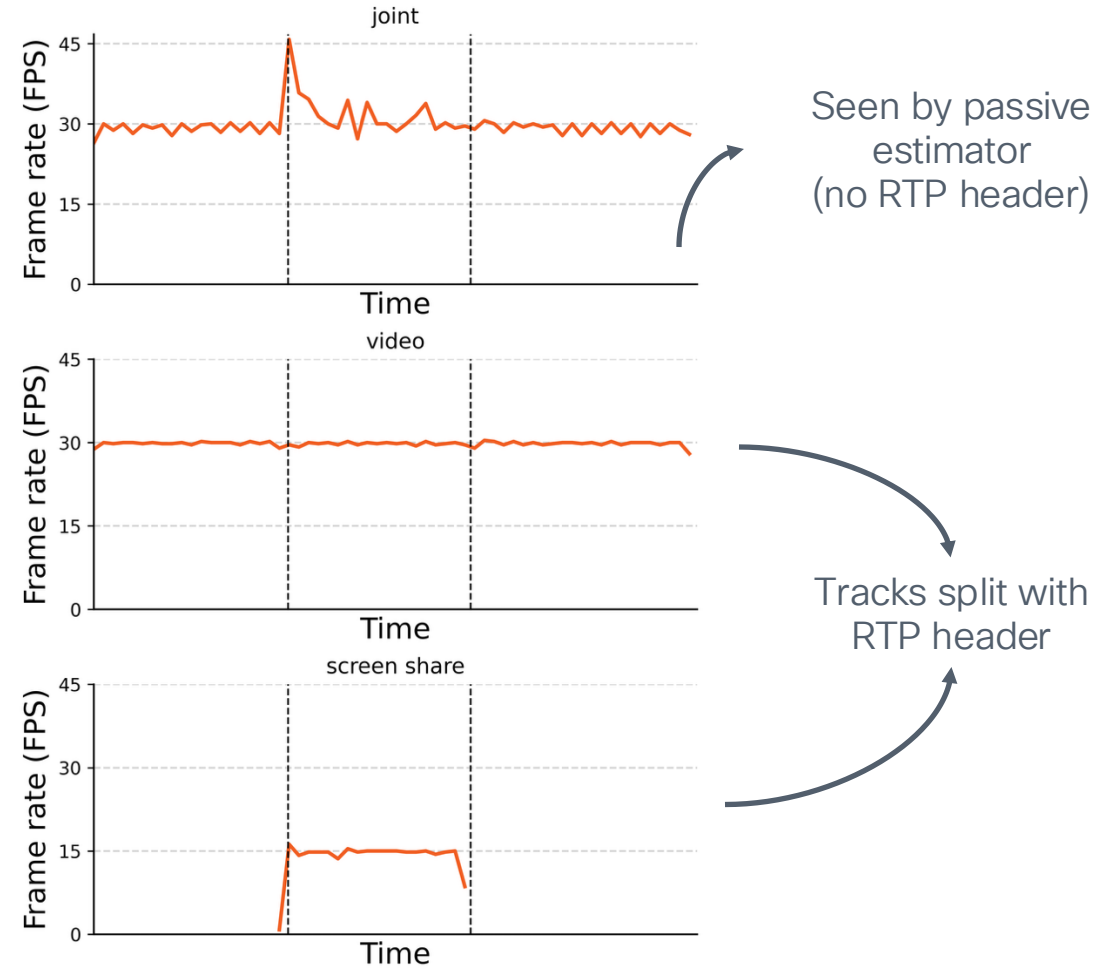

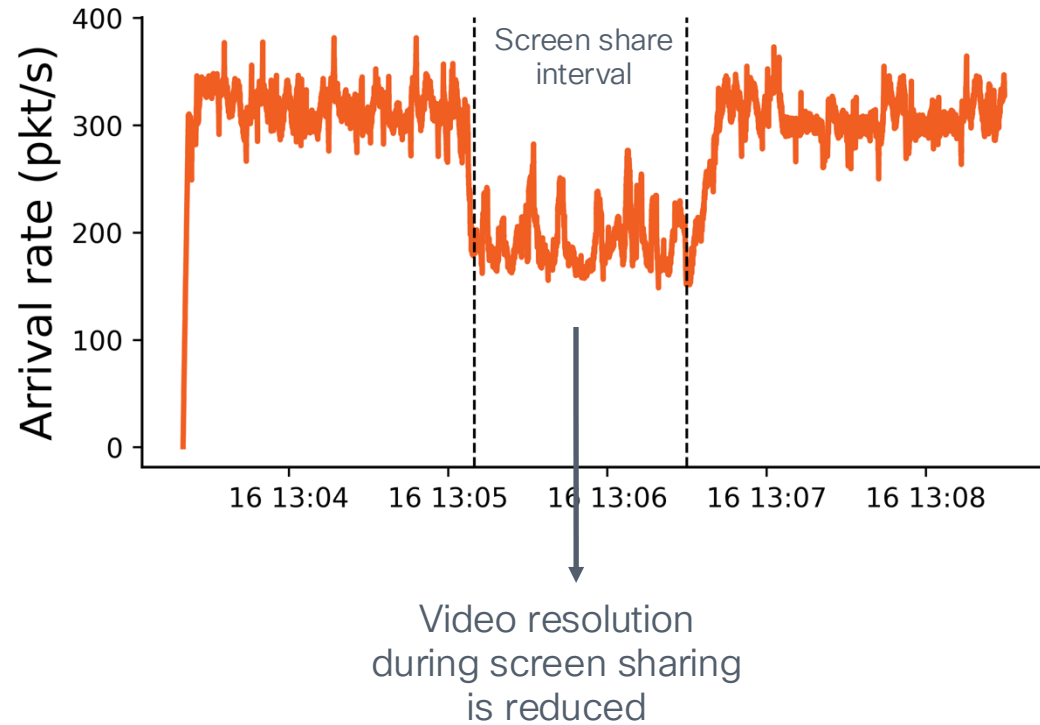

# Screen sharing detection

# Screen sharing detection

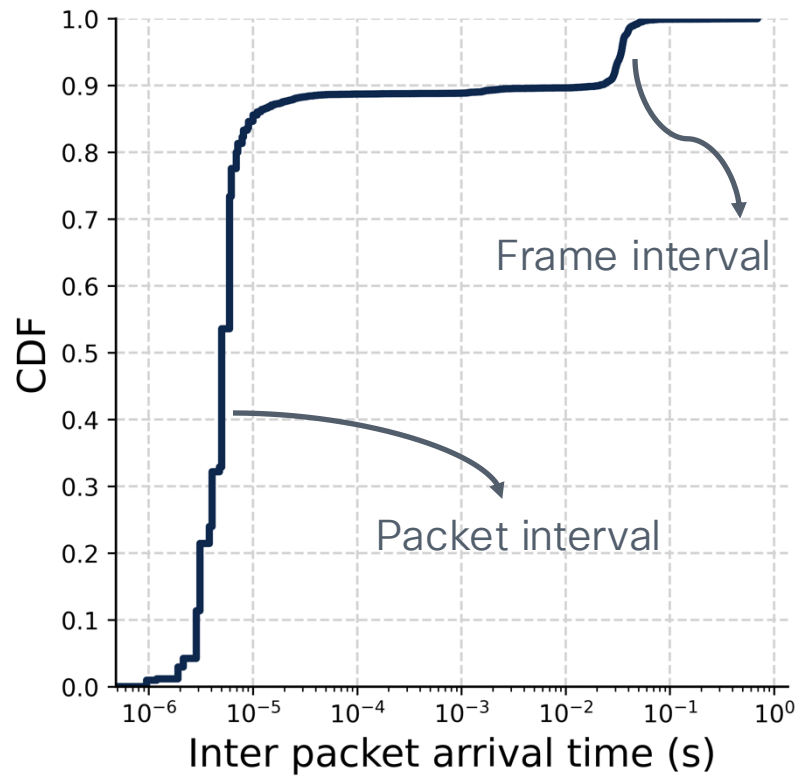

# Screen sharing detection

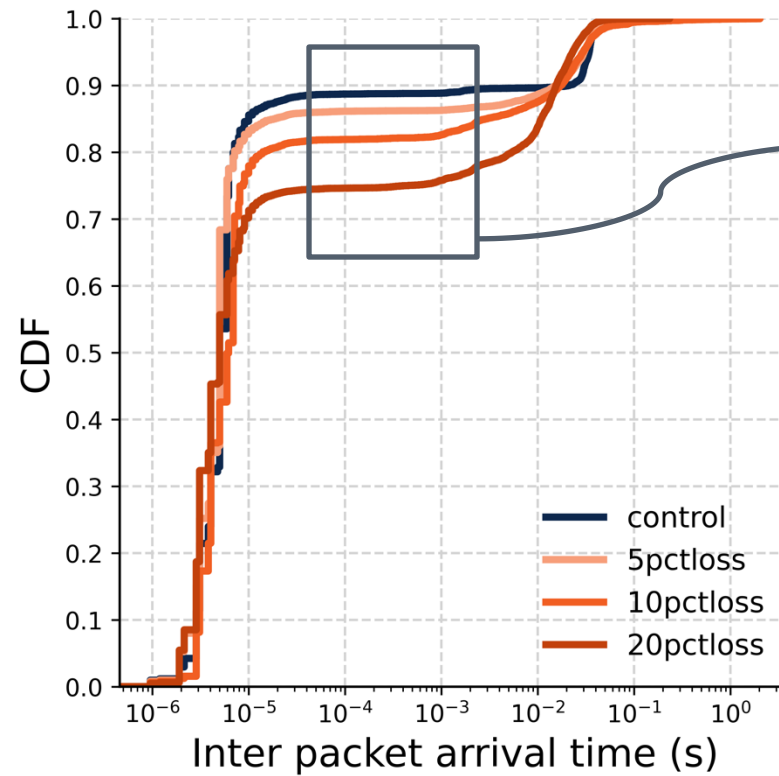

# Passive loss estimation

Ideal conditions:  
Two clear modes

With network degradation

Retransmission  
increases, disturbing  
the two clear modes

This could be  
leveraged for a  
**packet loss score**
